

Comments on the IRP2

by

Sustainable Energy Africa

Association incorporated under Section 21

Main Issues

- Transparency (advisory board formation? decisions around conflicting comments?)
- Demand-side intervention costing – on an equal basis with supply side measures
- Renewable energy – costed on an equal basis with more conventional supply options
 - Renewables role in national generation mix according to cost and supply security criteria (max use of SAPP?)
- Consistency with climate change imperatives
- Realistic costs for nuclear
 - Incl. costs of long-term hi-level waste storage

(Detailed sheet of technical comments also available)

THANK YOU
