Side Effects

Website: www.sacoronavirus.co.za • WhatsApp Support Line: 0600-123456 • Emergency Hotline: 0800 029 999

MESSAGE FROM THE MINISTER

by dialing *134*832*your ID number#. If you don't have an ID number just dial *134*832#. The services are zero rated and so you do not need data or airtime and you do not need a smartphone to be able to register by sms.

I am very pleased that the EVDS will soon have its own dedicated callcentre where you can call with your queries, access essential information, report side effects and get advice. I commend the partnership between business and government that has ensured that the call centre is up and running in time for phase two. The good news is that you can call the COVID-19 hotline 0800 029 999 to access the vaccine hotline and you can continue use this hotline for now while the vaccine sub-line is being set up.

I have visited several provinces now to assess their readiness to rollout phase two mass vaccination and so far I am happy that all provinces are going to deliver a good quality service for our people. Do look out for the provincial outreach teams who will be doing door-to-door registration drives and help your friends and family who are health care workers, traditional healers and aged 60 years and above to register.

I will continue on my road trip across the country to make sure that every province is ready to implement one of the most ambitious public interventions in the history of health.

I Choose VacciNation! We All Choose VacciNation!

Yours in health
Dr. Mkhize

Fellow Citizens

It was exciting to receive the first batch of Pfizer doses on Sunday evening at OR Tambo International Airport. The vaccines are being kept at ultra low temperatures (-70 degrees) in a specialized storage facility and will stay there for a few days whilst the final checks are done by our National Control Laboratory. This means that we will be moving to also vaccinate with Pfizer as we continue our vaccination rollout campaign.

As vaccines arrive we would like to immediately use them and vaccinate as many people as possible. We now have over 820 000 health care workers and nearly 700 000 senior citizens registered on EVDS. This is already 1,5 million citizens that have come forward to be vaccinated and we have enough doses of Pfizer for this number to be matched by the end of the month.

In addition we are still expecting the first 1,1 million doses of Johnson and Johnson to be delivered this month. They are awaiting final checks with international regulatory bodies, because their vaccine is made in many countries all over the world. These doses are ready and waiting for release.

We have also worked hard to make new ways for people to register for free. You can now register on the COVID Whatsapp number by sending "REGISTER" to 0600123456, or you can register by sms

EVDS

ELECTRONIC VACCINATION DATA SYSTEM

Registering to get vaccinated is easy!

Citizens aged 60 years and above need to register for their COVID-19 vaccination

Whatsapp

- Follow the instructions and enter all the information that is requested.
- You will need your identification number (Passport, Asylum seeker number, RSA ID or refugee number)
- Enter the location where you want to be vaccinated (home or work)
- If you are a member of a medical aid you will need your medical aid provider name and your medical aid number

#IChooseVacciNation

Should you encounter problems during the registration process contact the COVID-19 hotline 0800 029 999

All you need to know about vaccines and clots

What are the chances of getting a serious clot after getting vaccinated

There is a one in a million chance of getting a serious blood clot from Pfizer or Johnson and Johnson vaccines.

What kind of clotting condition is this?

A blood clot that develop after vaccination are is called a Vaccine Induced Thrombosis. The most serious of these clots tend to occur in large veins in the brain and abdomen while the platelets (that would normally be part of the clotting process) drop dangerously low as well. This is called Vaccine Induced Thrombotic Thrombocytopenia. It is an extremely rare condition, but local experts and treatments are available.

What should I do if I just had a Pfizer or Johnson and Johnson vaccine?

You must first be observed for about 15 minutes at the vaccination site and if you are released and feel well you can continue normally with your day. However if you are unwell call the COVID-19 hotline and ask for advice on what to do. Very soon, there will be special section in the callcentre to be able to handle large volumes of calls and anyone can call for any vaccine related query.

What are the symptoms of this clotting condition?

- Severe headache that does not go away. It may occur with blurred vision, vomiting, weakness on one side of the body or difficulty speaking.
- Severe abdominal pain that does not go away. It may be associated with vomiting.
- A rash of tiny red spots might occur under the skin around the injection site.
- Leg pain or swelling.
- Chest pain or shortness of breath.

What should you do if you have any of these symptoms?

If you get any of these symptoms, act without delay:

- Seek care. Go to an emergency unit and tell the doctor when you were vaccinated.
- A simple and rapid blood test will check if your platelets are low.
- Ask your doctor to phone the Sisonke Safety team of doctors at 0800 014 956 (24 hours).

“I CHOSE VACCINATION!”

TRADITIONAL HEALTH PRACTITIONER

Mr Baatile Michael Motshwaedi

The government has included traditional health practitioners in the first phase of the vaccination programme, which targets all frontline healthcare workers. Mr Baatile Michael Motshwaedi, from Monakato community in Bojanala District of North West Province is amongst the first group of traditional healers who received their COVID-19 jab.

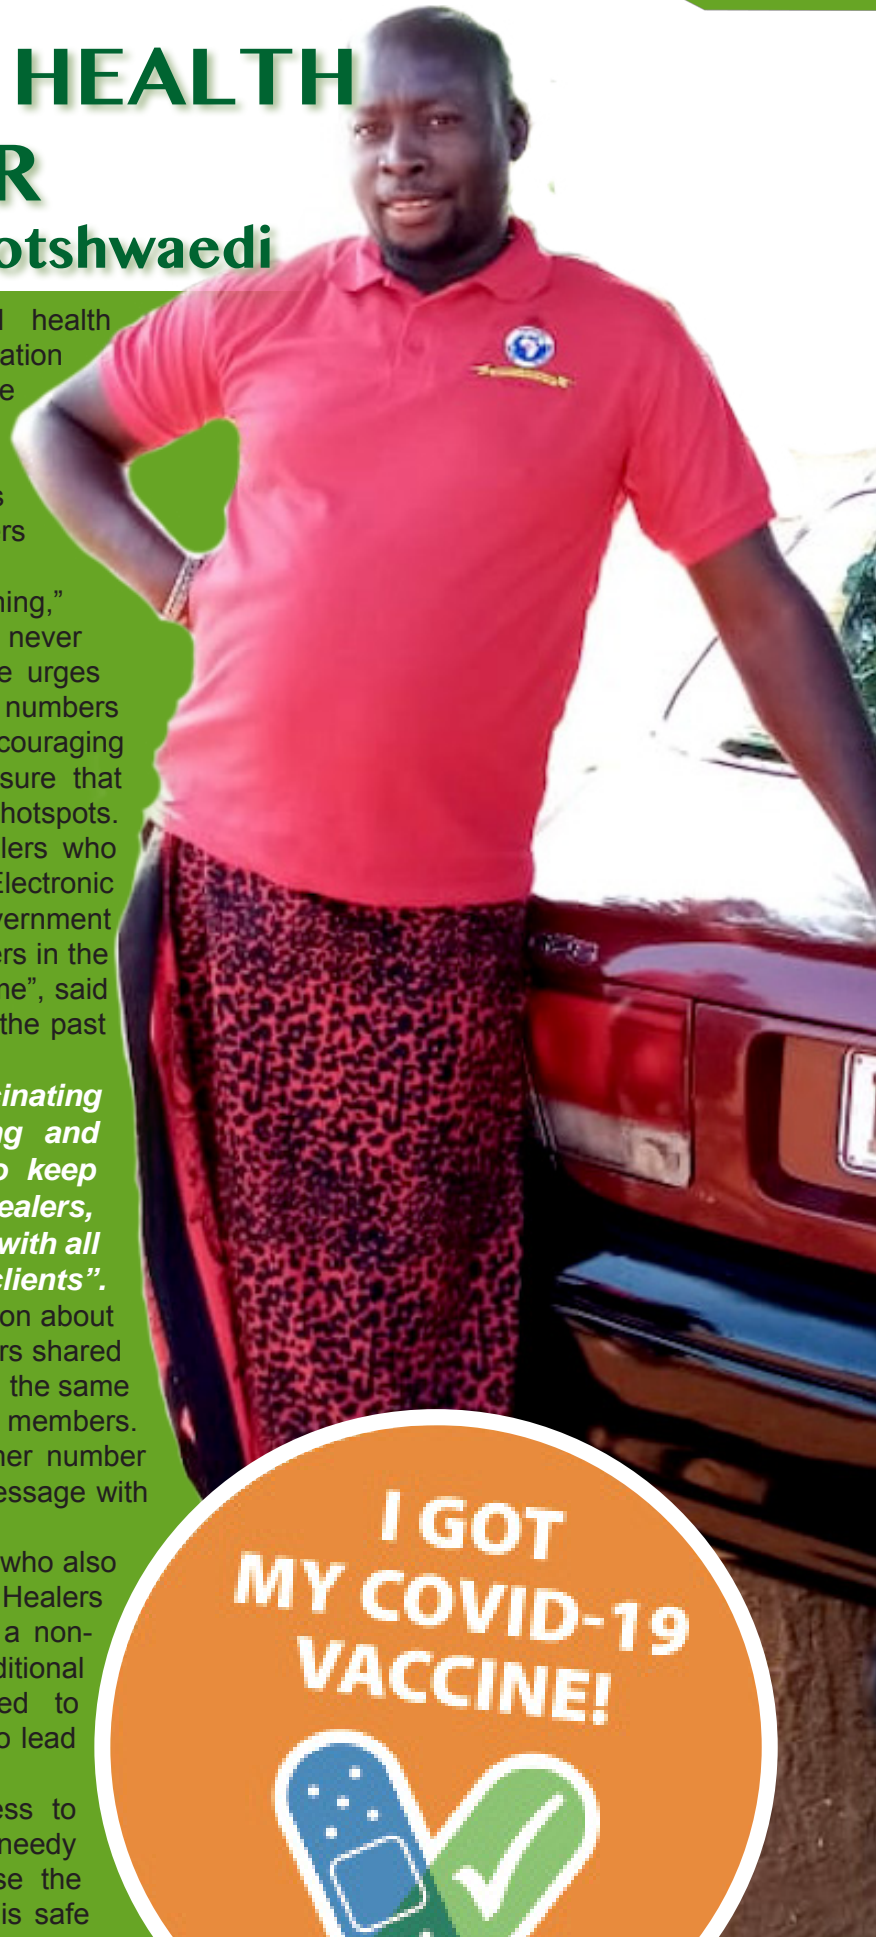

He described the process as “quick as lightning,” and he never experienced side effects and never tested positive before he got vaccinated. He urges fellow traditional healers to register in their numbers in order to receive the vaccine while encouraging compliance with COVID-19 protocols to ensure that their surgeries don’t become super-spreading hotspots. “While I appeal to my fellow traditional healers who wish to be vaccinated to register on the Electronic Vaccination Data System, I also plead with government to prioritise us alongside the healthcare workers in the rollout of the COVID-19 vaccination programme”, said Mr Motshwaedi, who has been practicing for the past 5 years.

He added that ***“We know that so far vaccinating together with mask wearing, sanitising and social distancing are effective ways to keep people safe. Even us, the traditional healers, we don’t go against science but comply with all protocols for the sake our lives and our clients”.***

Mr Motshwaedi said he came across information about the EVDS at his local clinic. Healthcare workers shared the registration link with him- he self-registered the same day and even managed to assist his family members. He was fortunate to get an SMS with voucher number immediately and later received a follow-up message with a date and venue to receive a life-saving jab.

He was motivated by his mentor in the sector who also serves as the Chairperson of the Traditional Healers Organization (THO) in his province. THO is a non-statutory, professional organization for Traditional Health Practitioners. He now feels obliged to motivate other healers to follow suit in order to lead by example.

He appeals to the government and business to support traditional health practitioners and needy communities with PPEs in order to minimise the transmission of the virus- because it no-one is safe until everyone is safe.
